(*): Flange types: A, F
(**): Flange types: A, D, F

Notes:
1. Three versions of hub flanges are available:
   - A = Motorglider engines bolt 7/16” – 20 UNF
   - D = ARP-502, Type 1
   - F = SAE No. 1, bolts 3/8” – 24 UNF
2. In the assembly drawing number and the part list number, the suffix (x) indicates the revision status.
2. Description

2-blade variable pitch propeller with a hydraulically operated blade pitch change mechanism providing the operation mode “Constant Speed”, “Feather” and “Reverse”. The MTV-21-A model can be optionally equipped with a mechanically operated feather mechanism. The hub is milled out of aluminium alloy. The blades have a wood composite structure. The leading edge of the blade is equipped with an erosion protection device. Optional equipment includes spinner and ice protection.

3. Equipment

Spinner: refer to MT-Propeller Service Bulletin No. 13 (see also VI.6)
Governor: refer to MT-Propeller Service Bulletin No. 14 (see also VI.6)
Ice Protection: refer to MT-Propeller Service Bulletin No. 15 (see also VI.6)

4. Dimensions

Blade diameter: 145 cm to 203 cm

5. Weight

Depending on Propeller-Design Configuration

“Constant Speed”: approx. 10 kg
“Constant Speed, Feather”: approx. 12 kg
“Constant Speed, Reverse”: approx. 12 kg
“Constant Speed, Feather, Reverse”: approx. 13,5 kg

6. Hub / Blade Combinations

For all design configurations listed under III.1 the following wooden blades are applicable:

-03, -04, -05, -06, -07, -08, -09, -12, -16, -23, -28, -31, -49, -51, -64, -69, -80, -81, -90, -106, -112, -122, -123, -125, -129, -140, -312

7. Control System

8. Adaptation to Engine

Hub flanges as identified by a letter-code in the propeller designation (see VI.5.)

9. Direction of Rotation

Direction of rotation (viewed in flight direction) as identified by a letter-code in the propeller designation (see VI.5.)
IV. Operating Limitations

1. Approved Installations

The suitability of a propeller for a given aircraft/engine combination must be demonstrated within the scope of the type certification of the aircraft.

VI. Notes

1. The EASA approved Airworthiness Limitations Section (ALS) of the Instructions for Continued Airworthiness is published in the applicable "Operation, Installation and Maintenance Manual" document, chapter 10.0 "Airworthiness Limitations Section". This ALS section is empty because no life limit is necessary for these models.

2. Some models of this propeller can incorporate a start pitch lock which may prevent propeller feathering below a given propeller speed.

3. The overhaul intervals recommended by the manufacturer are listed in MT-Propeller Service Bulletin No. 1.

4. EASA Type Certificate and Type Certificate Data Sheet No. P.101 replace LBA-Germany Type Certificate and Type Certificate Data Sheet No. 32.130/86.
