Subject: Leading Edge Inspection

Affected Propeller: MTV-33-1-A/( )-( ) - TCDS EASA-P.048
MTV-34-1-A/( )-( ) - TCDS EASA P.049,
which are manufactured between 1.September 2017 until 1.June 2018 and listed per Serial Number on the next page.

Reason: If the stainless steel leading edge shows signs of delamination along the leading edge, it maybe result in a complete leading edge delamination.

Accomplishment: Before every flight during preflight inspection until the propeller has been returned to MT for inspection.

Inspection Procedure: 1. Visual Inspection
Inspect the leading edge visual for any impacts or delaminations.

2. Coin-Tap Test
Perform the coin-tap test to identify a delamination.

This Service Bulletin has been approved according the procedures established for the EASA-certified Design Organization No.: EASA.21J.020.

No. 34 R1  

DOA No.  

EASA.21J.020

---

**Action:**

If on one of the listed propellers below a delamination can be found, the stainless steel leading edge **MUST be replaced** by a new stainless steel leading edge.

For the replacement the propeller must be sent back to the MT Propeller factory or to one of the certified MT Propeller service center.
